Board of Trustees
Arkansas Teacher Retirement System
Little Rock, Arkansas
Dear Board Members:
Presented in this report are the results of the Annual Actuarial Valuation of non-retired members as of June 30, 2014. The June $30^{\text {th }}$ annual valuation of retired lives receiving monthly benefits indicates the liabilities for future benefit payments to existing retirees. These liabilities are covered in a separate report. These are also covered briefly in this report on page B-4.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Retirement System only in its entirety and only with the permission of the Board.

The valuation was based upon census data and financial information provided by the System's administrative staff. Preparation of this data requires considerable staff time. The helpful cooperation of the Arkansas Teacher Retirement System staff in furnishing the data is acknowledged with appreciation.

We checked for internal and year-to-year consistency, but did not otherwise audit the data. We are not responsible for the accuracy or completeness of the data provided by ATRS. The actuarial assumptions used for valuation purposes are summarized in Section G. These assumptions reflect experience during the period July 1, 2005 to June 30, 2010.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law. This report does not contain an analysis of the potential range of such future measurements.

To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The actuarial assumptions used for the valuation produce results which, individually and in the aggregate, are reasonable.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. Brian Murphy and Judy Kermans are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein. The actuaries submitting this report are independent of the plan sponsor.

Respectfully submitted,

Judith A. Kermans, EA, MAAA, FCA

## SECTION A

EXECUTIVE SUMMARY

## EXECUTIVE SUMMARY

General Financial Objective. Section 24-3-103 of the Arkansas Code provides as follows (emphasis added):

> " 6.01 . (1) The general financial objective of each Arkansas public employee retirement plan shall be to establish and receive contributions which, expressed as percents of active member payroll, will remain approximately level from generation to generation of Arkansas citizens. More specifically, contributions received each year shall be sufficient both to (i) fully cover the costs of benefit commitments being made to members for their service being rendered in such year and (ii) make a level payment which if paid annually over a reasonable period of future years will fully cover the unfunded costs of benefit commitments for service previously rendered...."

Arkansas Teacher Retirement System Status: Based upon the results of June 30, 2014 actuarial valuations, ATRS is satisfying the financial objective of level-contribution-percent financing.

This report contains the results of the June 30, 2014 valuation. The table below shows a summary of the data used in the valuation. This data was the basis for determining valuation results and recommended employer contribution rates.

|  | Number | Average | Type of Average |
| :--- | ---: | ---: | :---: |
| Active not in TDROP | 70,225 | $\$ 35,673$ | Pay |
| Active in TDROP | 4,127 | 61,234 | Pay |
| Deferred Vested | 11,763 | 5,168 | Annual Projected Benefit |
| Retired | 38,478 | 21,368 | Annual Current Benefit |
| Total Members | $\mathbf{1 2 4 , 5 9 3}$ |  |  |

Included in the 2014 valuation were 3,845 reemployed retirees (shown in the Retired category) with total earnings of $\$ 93.0$ million. ATRS receives $14 \%$ employer contributions on these individuals per Arkansas Code Section 24-7-708.

The June 30, 2014 valuation results are used to determine the contribution rate for Fiscal Year 2016.
Employer Contribution Rates for Fiscal Years
Ending June 30, 2016 and 2015 (Prior Year)

| Computed Contributions for | Percents of Active T-DROP and Return to Work Payroll |  |  |  |
| :--- | ---: | ---: | ---: | ---: |
|  | Teachers | Support | Combined | Prior Year |
| Normal Cost | $12.24 \%$ | $10.68 \%$ | $\mathbf{1 1 . 7 6 \%}$ | $11.75 \%$ |
|  | $5.30 \%$ | $4.07 \%$ | $\mathbf{4 . 9 2 \%}$ | $4.86 \%$ |
| Net Employer Normal Cost | $6.94 \%$ | $6.61 \%$ | $\mathbf{6 . 8 4 \%}$ | $6.89 \%$ |
| Unfunded Actuarial Accrued Liabilities |  |  | $\mathbf{7 . 1 6 \%}$ | $7.11 \%$ |
| Employer Contribution Rate |  |  | $\mathbf{1 4 . 0 0 \%}$ | $14.00 \%$ |
| Amortization Years |  |  | $\mathbf{3 9 . 1}$ | 69.9 |
| Funded Ratio |  |  | $\mathbf{7 7 . 3 \%}$ | $73.3 \%$ |

The amortization period this year is 39 years, a decrease from last year's period of 70 years. The decrease occurred primarily due to investment gains, with the annual market rate of return being $19.17 \%^{\#}$ compared to an assumed rate of $8.0 \%$. Investment gains and losses that occur each year are smoothed in over a 4 -year period. As of June 30, 2014, the market value of assets exceeded the actuarial value of assets by approximately $\$ 1.5$ billion.

The Arkansas Teacher Retirement System remains stable with a $77.3 \%$ funded position as of June 30, 2014. Unless there is an investment loss in Fiscal Year 2015, the amortization period is likely to fall below 30 years in the next valuation. Based on the June 30, 2014 valuation, an employer contribution rate of $14.9 \%$ would be needed to return the amortization period to 30 years as of June 30, 2014.

However, 30 years should be viewed as a maximum period rather than the goal. If a 30-year period is used, the UAAL grows in \$ amount for many years, although it declines as a \% of payroll. This situation is referred to as "negative amortization" and is falling out of favor. Based upon ATRS' assumptions, it takes about an 18-year period to avoid the "negative amortization." Therefore, it would really be desirable to have a lower amortization period than 30 years. With reasonably good experience, projections show that we may be there (at 18 years) in a few years, even without a contribution rate increase. A contribution increase to the $17 \%$ of pay area would get us there now. If the Market Value of Assets were used, we would already be at 16 years.

[^0]The following graph shows a history of the amounts contributed vs. the annual required contributions (ARC) and a projection of the amounts that are expected to be contributed in FY15 and FY16.

Fiscal Year

Since the amortization period exceeded 30 years in the 2005, 2006, 2009, 2010, 2011, 2012, 2013, and 2014 valuations, the amount contributed is less than the ARC in FY 2007, FY 2008, FY 2011, FY 2012, FY 2013, and FY 2014 and will also be less than the ARC in FY 2015 and FY 2016 (unless an increase in the contribution rate occurs). In FY 2009 (June 30, 2007 valuation) and FY 2010 (June 30, 2008 valuation), the amount contributed equaled the ARC.

## SECTION B

VALUATION RESULTS

## Employer Contribution Rate Computed as of June 30, 2014 <br> FOR THE FISCAL YEAR ENDING June 30, 2016

| Computed Contributions for | Percents of Active Member Payroll |  |  |  |
| :--- | ---: | ---: | ---: | :---: |
|  | Teachers | Support | Combined | Prior Year |
|  |  |  |  |  |
|  |  |  |  |  |
|  | $9.59 \%$ | $7.17 \%$ | $\mathbf{8 . 8 5 \%}$ | $8.84 \%$ |
| Deferred Annuities | $1.61 \%$ | $2.13 \%$ | $\mathbf{1 . 7 7 \%}$ | $1.77 \%$ |
| Survivor Benefits | $0.19 \%$ | $0.16 \%$ | $\mathbf{0 . 1 8 \%}$ | $0.18 \%$ |
| Disability Benefits | $0.47 \%$ | $0.42 \%$ | $\mathbf{0 . 4 5 \%}$ | $0.45 \%$ |
| Refunds of Member Contributions | $0.38 \%$ | $0.80 \%$ | $\mathbf{0 . 5 1 \%}$ | $0.51 \%$ |
| Total | $12.24 \%$ | $10.68 \%$ | $\mathbf{1 1 . 7 6 \%}$ | $11.75 \%$ |
| Average Member Contributions | $5.30 \%$ | $4.07 \%$ | $\mathbf{4 . 9 2 \%}$ | $4.86 \%$ |
|  |  |  |  |  |
| Net Employer Normal Cost | $6.94 \%$ | $6.61 \%$ | $\mathbf{6 . 8 4 \%}$ | $6.89 \%$ |
| Unfunded Actuarial Accrued Liabilities |  |  | $\mathbf{7 . 1 6 \%}$ | $7.11 \%$ |
| Employer Contribution Rate |  |  | $\mathbf{1 4 . 0 0 \%}$ | $14.00 \%$ |
| Amortization Years |  |  | $\mathbf{3 9 . 1}$ | 69.9 |

The amortization period is the number of years it will take to pay off the unfunded liability of $\$ 3.9$ billion assuming that the employer contribution rate remains at the $14 \%$ of payroll level. Since 2000, the period has varied from a low of 19 years to a high of over 100 years. Unless there is an investment loss in FY 2015, the amortization period is likely to fall below 30 years in the next valuation. Please see additional comments regarding the amortization period on page A-2.

# Financing \$20.0 Billion* of Benefit Promises for Present Active and Retired Members <br> JUNE 30, 2014 

## Sources of Funds

## Uses of Funds

* Present value of future benefits. All amounts are in billions.

ATRS' funding objective is to meet long term benefit promises through contributions that remain approximately level from year to year as a percent of member payroll. If the contributions to the System are level in concept and soundly executed, the System will pay all promised benefits when due -- the ultimate test of financial soundness. Testing for level contribution rates is the long term test.

A short condition test is one means of checking a system's progress under its funding program. In a short condition test, the plan's present assets (cash and investments) are compared with: 1) Member contributions on deposit; 2) The liabilities for future benefits to present retired lives; 3) The liabilities for service already rendered by members. In a system that has been following the discipline of level percent-of-payroll financing, the liabilities for member contributions on deposit (liability 1 ) and the liabilities for future benefits to present retired lives (liability 2 ) will be fully covered by present assets (except in rare circumstances). In addition, the liabilities for service already rendered by members (liability 3 ) will be partially covered by the remainder of present assets. The larger the funded portion of liability 3 , the stronger the condition of the system. Liability 3 being fully funded is unusual.

The schedule below illustrates the history of Liability 3 of the System and is indicative of the ATRS objective of following the discipline of level percent-of-payroll financing.

| Val. <br> Date | (1) <br> Member <br> Contrb. | (2) <br> Retirees and Benef. | (3) <br> Active and <br> Inactive Members <br> (Employer <br> Financed Portion) | Present <br> Valuation Assets | Portion of Present Values Covered by Present Assets |  |  |  |

## Actuarial Value of Assets as a Percent of Accrued Liabilities (Funded Ratio)

[^1]
## Expected Development of Present Population June 30, 2014 (Excludes Rehired Retirees)

## Population Projection

$\square$ Retirements $\square$ Non-Vested Separations $\square$ Deaths and Disabilities $\square$ Vested Separations

The charts show the expected future development of the present population in simplified terms. The retirement system presently covers 74,352 active members (includes T-DROP). Eventually, 10\% of the population is expected to terminate covered employment prior to retirement and forfeit eligibility for an employer provided benefit. Approximately $87 \%$ of the present population is expected to receive monthly retirement benefits. Approximately 3\% of the present population is expected to become eligible for death-in-service or disability benefits. Within 9 years, over half of the covered membership is expected to consist of new hires.

## SECTION C <br> SUMMARY OF BENEFITS

# SUMMARY OF Provisions <br> June 30, 2014 

1. Voluntary Retirement - A.C.A. § 24-7-701. A member may retire at age 60 with 5 or more years of credited service, or after 28 years of credited service regardless of age.
2. Early Retirement - A.C.A. § 24-7-702. A member who has more than 25 but less than 28 years of credited service and has not attained age 60 years may retire and receive an immediate early retirement annuity. The early annuity is an age \& service annuity reduced by the lesser of (i) and (ii) below:
(i) $5 / 12$ of $1 \%$ multiplied by the number of months by which early retirement precedes completion of 28 years of service, or
(ii) $5 / 12$ of $1 \%$ multiplied by the number of months by which early retirement precedes the attainment of age 60 years.
3. Deferred Retirement - A.C.A. § 24-7-707. An inactive member who has 5 or more years of credited service will be entitled to an age \& service annuity beginning at age 60 , provided accumulated contributions are left on deposit with the retirement system.
4. Disability Retirement - A.C.A. § 24-7-704. An active member, with 5 or more years of credited service, who becomes totally and permanently disabled may be retired and receive a disability annuity computed in the same manner as an age \& service annuity. In order to qualify for disability retirement, the member must exhibit symptoms of physical or mental incapacitation while the member is employed by a system employer as an active member (Act 973 of 2011). A member who is eligible for age and service retirement (age 60 and 5 years of service or 28 years of service at any age) is no longer eligible to apply for disability retirement and a disability member may not be employed directly or indirectly by an ATRS covered employer, which includes indirect employment through an independent contractor, limited liability company, partnership, corporation or legal entity (Act 493 of 2013).
5. Final Average Salary (FAS) - A.C.A. 24-7-736. A member's final average salary is the average of the annual salaries paid during the period of 3 years of credited service producing the highest annual average. Beginning July 1, 2009, no salary paid in any year which is utilized in the computation of the members' final average salary, shall exceed $120 \%$ of the salary earned in the preceding year. If a member has a break in covered employment for eight years or more between

# Summary of Provisions <br> June 30, 2014 

any of the member's highest salary years used in the calculation of final average salary, then antispiking checking does not apply to the next highest year in the formula (Act 225 of 2011 effective date of law July 27, 2011). There will no longer be any stacking of part-time college/teaching work for school district employees (Act 513 of 2011). Act 555 of 2013 limits the use of a reciprocal system's calculation of FAS if the ATRS member's reciprocal service credit is less than the number of years used to calculate the FAS for ATRS. Beginning July 1, 2014, if a member has less than three years of reciprocal service (the number of years used to calculate ATRS' FAS), then ATRS will obtain the salary and service credit from the reciprocal system, and use that salary and service as if it had all been earned in ATRS to calculate a FAS for retirement. Act 720 of 2013 made a minor change to final average salary for members who stop work during their last year of employment immediately before retirement.

## 6. Age \& Service Annuity and Disability Annuity - A.C.A. §§ 24-7-705, 24-7-727

(stipend). The annuity payable will not be less than the total of: years of contributory service times 2.15\% of FAS; plus years of non-contributory service times 1.39\% of FAS; plus \$900 for all members with 10 or more years of ATRS credited service. For a member who elected to contribute on only the first $\$ 7,800$ of each annual salary after June 30, 1969, each annual salary used in computing FAS is limited to a maximum of $\$ 7,800$. Act 966 of 2013 allows the ATRS Board to set the contributory multiplier for service credit earned after June 30, 2013, within a range of $1.75 \%$ to $2.15 \%$. The noncontributory multiplier for service credit earned after June 30, 2013, may be set within a range of $0.5 \%$ and $1.39 \%$. In addition, this act would allow the Board to set special multiplier rates for the first 10 years of ATRS service earned after June 30, 2013, for both contributory and noncontributory service. After members earn more than 10 years of service after June 30, 2013, the Board may increase the multiplier rates to the standard multiplier rates for all years of service. This act is dependent upon the actuary's certification that the amortization period is in excess of 30 years to pay unfunded liabilities prior to any reduction to the multipliers.
7. T-DROP - ACA § 24-7-1301-1316. A member with 28 or more years of service may participate in the Teacher Deferred Retirement Option Plan (T-DROP, Act 1096 of 1995). An amount equal to the amount that would have been paid had the member retired, reduced by $1 \%$ for each year of contributory, $1 \%$ for each year of reciprocal (Act 162 of 2011) and $6 / 10 \%$ for each year of non-contributory service, is deposited into a T-DROP account. Members who enter T-

# Summary of Provisions <br> June 30, 2014 

DROP with less than 30 years of service are subject to an additional $6 \%$ reduction for each year less than 30 years. The annual addition to the T-DROP account is increased each year by $3 \%$ of the member's annuity at the initial participation date and the account is credited with $2 \%$ less than the system's rate of return (but not less than $2 \%$, nor greater than $6 \%$ interest on the mean balance) each year. Deposits to T-DROP cease at the earlier of 10 years of T-DROP participation or separation from service. T-DROP participants may continue in covered employment after 10 years of participation, but do not accumulate additional service credit or make member contributions. Beginning July 1, 2010, members who remain in T-DROP for more than 10 years get interest on T-DROP account balances. The 10 -year plus T-DROP interest rate that will be credited to an active members' T-DROP account must be no less than $4 \%$ and no greater than $6 \%$ as determined by the Board of Trustees. Upon actual retirement, the member may receive the TDROP account balance in the form of a lump sum or as an additional annuity. Beginning July 1, 2011, the T-DROP distribution may be a combination of both lump sum and annuity allowing members to take a partial annuity along with a corresponding partial lump sum (Act 162 of 2011). For active participants who enter the T-DROP Plan July 1, 2013 or later, the reduction for contributory, reciprocal, and noncontributory service credit is $1 \%$ for each year and fractional year of service credit (Act 605 of 2013).
8. Post-Retirement Increases - A.C.A. §§ 24-7-713, 24-7-727 (compound COLA). Each July 1, annuities are adjusted to be equal to the base annuity times $100 \%$ plus $3 \%$ for each full year in the period from the effective date of the base annuity to the current July 1. The base annuity is the amount of the member's annuity on the later of July 1, 2001 or the effective date of retirement, as re-determined by Acts 396 of 1999 and 992 of 1997. The July 1, 2009 cost of living adjustment for retirees was compounded. The annuity was adjusted by multiplying $3 \%$ times the June 30, 2009 retirement benefit amount. After it was calculated on July 1, 2009, the base amount was reset to be the July 1, 2009 benefit amount. Future cost of living raises will be established by the new updated base amount. Future cost of living adjustments will be evaluated on an annual basis to determine if a simple or compound cost of living increase will be given, depending on the financial condition of the System. Act 967 of 2013 gives the ATRS Board authority to reverse the compounding of a benefit and reset the base amount to the pre-compounding amount. If this were to occur, it would include participants in the T-DROP plan. The future benefits of a member would not be reduced to recover any benefits paid to a member as a result of the compounding. In addition, the member's benefit on the date of the reversal would not be impacted, but future COLA's would be based upon the reset base amount. This act is dependent upon the actuary's certification that the amortization period is in excess of 30 years to pay unfunded liabilities prior to any reversal of the compounding of the COLA.

# Summary of Provisions <br> June 30, 2014 

9. Survivor Benefits - A.C.A. § 24-7-710. Upon the death of an active member, who has 5 or more years of credited service (which includes the year immediately preceding the death), the following annuities are payable:
(a) The surviving spouse receives an annuity computed in the same manner as if the member had (i) retired the date of his death with entitlement to an annuity, (ii) elected Option A-100\% Survivor Annuity, and (iii) nominated the spouse as joint beneficiary. If the member has attained age 60 and has acquired 5 years of credited service or has acquired 25 years of credited service regardless of age, the annuity begins immediately; otherwise the annuity begins the month following the date the member would have attained age 60 . Under certain circumstances, a lump sum distribution may be made to the beneficiary(ies) of the deceased member.
(b) Each dependent child receives an annuity in an amount equal to $20 \%$ of the highest salary received in covered employment (including the year of death). If there are 3 or more dependent children, the aggregate amount of the dependent children's annuity shall not exceed $60 \%$ of the member's highest salary received in covered employment and shall be divided equally among the dependent children. A child is dependent until the child's death, marriage, or attainment of age 18 (age 23 if the child is a full-time student).

Beginning July 1, 2013, survivors have three months to file an application for benefits if the benefits are to begin the month of the member's death. Otherwise, the benefits will begin the month that the survivor application is filed with the system (Act 571 of 2013).
10. Lump Sum Death Benefit - A.C.A. § 24-7-720. Beneficiaries of deceased active members or retirees with 10 or more years of ATRS credited service are eligible to receive a lump sum death benefit of up to $\$ 10,000$ ( $\$ 6,667$ for non-contributory service-benefit). The amount will be prorated for members who have both contributory service and non-contributory service. Members with 15 or more years of contributory service will receive the full $\$ 10,000$ (Act 977 of 2011).
11. Members' Contributions - A.C.A. § 24-7-406. Members contribute $6 \%$ of their salaries (by individual election, members who became members before July 1, 1971 could contribute on only the first $\$ 7,800$ of their annual salaries). If a member leaves service prior to becoming eligible to retire, the accumulated contributions are returned upon request. No interest is credited to a member's contributions for the first year of membership; after 1 year, interest credits are $2 \%$

# Summary of Provisions June 30, 2014 

annually (effective June 30, 2010). Effective June 30, 2012, the interest credit is 1\%. Effective July 1, 1986, a non-contributory plan was created. Effective July 1, 1993, all new members including any former active members were automatically non-contributory members. By individual election, members could choose to contribute. The benefit accrual rate for noncontributory members is reduced. Effective July 1, 1999 the default choice for new members is contributory. All current members had until July 1, 2000 to make a final election. Effective July 1, 1997, all future member contributions are tax-deferred in accordance with §414(h) of the Internal Revenue Code of the United States. Effective July 1, 2005, all non-contributory members whose status changes from support to teacher (contracted for more than 181 days), will become contributory. Effective July 1, 2006 and each July 1 thereafter, members who previously elected to be non-contributory may elect to change to contributory status under Act 385 of 2005. Effective July 1, 2007, all noncontributory members may elect to change to contributory status. The election is irrevocable. Effective July 1, 2009, employer contributions are collected at a rate of $14 \%$ on active members, T-DROP participants (even those who work beyond the 10-year participation period), and working retirees (Act 743 of 2009). Act 602 of 2013 allows the ATRS Board to set the member contribution rate between $6 \%$ and $7 \%$ of salary. This act is dependent upon the actuary's certification that the amortization period is in excess of 30 years to pay unfunded liabilities prior to any increase in the current contribution rate. The rate for fiscal year 2014 remains at 6\%.
12. Act 808 Retirement - A.C.A. § 24-4-732. Any employee of a state agency who was an active member of the Arkansas Teacher Retirement System on April 8, 1987, and who qualified for retirement before January 1, 1988, could become a member of the Arkansas Public Employees Retirement System and retire from that system. All credited service was transferred to that system but the member's contributions were retained by the Arkansas Teacher Retirement System and the benefit amount is transferred monthly to the Arkansas Public Employees Retirement System. Each July 1, annuities are adjusted by $3 \%$ (compound escalator).
13. Act 793 Retirement - A.C.A § 24-4-522. Any employee who was a member of the rehabilitation services in 1977 was permitted to become a member of the Arkansas Public Employees Retirement System. Liabilities associated with prior service earned through 6/30/1978 remain in the Arkansas Teacher Retirement System. Future service is allocated to the Arkansas Public Employees Retirement System. Each July 1, annuities are adjusted by 3\% (compound escalator).
14. Retiree Health Stipend - A.C.A. § 24-7-713. Each retired member as of June 30, 2008, with 5 or more years of ATRS credited service receives $\$ 75$ per month toward retiree health care

# Summary of Provisions 

June 30, 2014
premiums. Members in T-DROP do not receive the $\$ 75$ per month until actual retirement. For all members retiring on or after July 1, 2008, a minimum of 10 years of ATRS credited service is required to receive the $\$ 75$ per month stipend. Act 603 of 2013 allows the ATRS Board to increase or decrease the stipend to a minimum of $\$ 1$ per month and a maximum of $\$ 75$ per month. This act is dependent upon the actuary's certification that the amortization period is in excess of 30 years to pay unfunded liabilities prior to any reduction in the current stipend. The stipend for fiscal year 2015 remains at $\$ 75$ per month.
15. Optional Forms of Benefits - A.C.A. § 24-7-706:

## Option 1 (Straight Life Annuity)

A member will receive the maximum monthly benefit for which he/she qualifies, throughout his/her lifetime. No monthly benefits will be paid to his/her beneficiary after the member's death. Should a member die before he/she has drawn in benefits an amount equal to his/her contributions plus earned interest, the balance will be paid to a designated beneficiary. The designated beneficiary may be anyone chosen by the member.

## Option A (100\% Survivor Annuity)

Under this option a member will receive a reduced annuity throughout his/her lifetime. Upon the member's death, the designated beneficiary will receive the same annuity for the balance of his/her lifetime.

## Option B (50\% Survivor Annuity)

Under this option a member will receive a reduced annuity throughout his/her lifetime. Upon the member's death, the designated beneficiary will receive one-half (1/2) of this annuity for the balance of his/her lifetime.

## Option C (Annuity for Ten Years Certain and Life Thereafter)

A reduced monthly benefit payable for 120 months. After that time, a member's monthly allowance will revert to the amount he/she would have received under the regular plan and continue for life. If the member dies before receiving 120 payments, the designated beneficiary will receive a monthly benefit in the same amount until monthly benefits to both the member and the beneficiary equal 120 monthly payments. No further benefits are then payable to the beneficiary.

Option Factors are based upon an 8.0\% interest rate and the 1971 Group Annuity Mortality Table projected to 1984 , with a $75 \%$ unisex mix.

# SUMMARY OF PROVISIONS 

June 30, 2014
16. Refund of Member Contributions - A.C.A. § 24-7-711. Any termination refund made to a member or a lump sum payout made to a surviving spouse after July 1, 2011, cancels all service credit, including noncontributory service credit (Act 976 of 2011); any repurchase of refunded service will be as contributory years at actuarial cost (Act 69 of 2011). Act 140 of 2013 specifies that all membership rights (including noncontributory service credit) and beneficiary designations to the ATRS are cancelled when a member gets a refund of his or her contributions.
17. Contract Buyout - A.C.A. § 24-7-735. During periods of contract buyout/litigation/termination, members will not receive service credit if no on-call service or on site work is performed. ATRS will not allow the purchase of the time between actual work and the settlement (Act 163 of 2011).
18. Actuarial Cost of Service - A.C.A. §§ 24-1-107, 24-2-502, 24-7-202, 24-7-406, 24-7-501, 24-7-502, 24-7-612, 24-7-602, 24-7-603, 24-7-604, 24-7-606, 24-7-607, 24-7-610, 24-7-611. Effective July 1, 2011, all service purchases will be at actuarial cost (Act 69 of 2011).
19. Deceased Member Refund of Contributions - § 24-7-711. Effective July 1, 2011, if a beneficiary is not eligible for survivor benefits, or if a surviving spouse is eligible and chooses a contribution refund, the interest on the refund stops the July 1 following the member's death (Act 136 of 2011).
20. Limit Lookback to Five Years - A.C.A. §§ 24-7-202, 24-7-205. Effective July 1, 2011, absent intentional nondisclosure, fraud, misrepresentation, or criminal act, members can no longer establish old service previously unreported (Act 138 of 2011). (More than 20 cases per year.)
21. Service Credit Requirements - A.C.A. §§ 24-7-501, 24-7-502, 24-7-601, 24-7603, 24-7-604, 24-7-606, 24-7-607, 24-7-611. Effective July 1, 2011, members must receive 160 days of service to be credited with a year of service credit (Act 974 of 2011).

# Summary of Provisions 

June 30, 2014
22. T-DROP Cash Balance Account. Effective July 1, 2012, a T-DROP cash balance account was established that allows members exiting T-DROP to place all or a portion of their T-DROP proceeds into a Cash Balance Account (CBA) at ATRS. The interest rate credited will be between $2.0 \%$ and $4.0 \%$, increasing 25 basis points for each year on deposit.
23. Delinquent Member Contributions - A.C.A. § 24-7-205. Act 336 of 2013 allows members to forfeit service credit for any contributory fiscal year for which there is a balance due to the system.
24. Purchase of Air Time as a Result of Wrongful Termination - A.C.A. §§ 24-7702, 24-7-735, 6-17-413. Act 521 of 2013 allows a member to purchase service credit under a settlement agreement or court order to resolve a claim of wrong termination if the service credit is purchased from the date of termination by an ATRS employer to the date of the resolution of the dispute. This service credit would be purchased at actuarial cost.
25. Buyout of Inactive Members—A.C.A. § 24-7-505. Act 606 of 2013 allows the ATRS Board to create a voluntary "buyout plan" for inactive vested members. The System will make a one-time lump sum payment to a member, a surviving spouse, or an alternate payee in exchange for a member, surviving spouse, or alternate payee's cancellation of membership and retirement benefit rights. The buyout plan will be established by Board rules. The rule is $16-1$ Cash and Savings Help Program for Members (CASH). This particular plan offering will end June 30, 2015. Depending upon the success of the plan, it may be extended by the Board.

## SAMPLE BENEFIT COMPUTATIONS FOR A MEMBER RETIRING JUNE 30, 2014

The data for the Example member is shown below.
A. \$35,000 Final Average Compensation
B. 32 Total Service Credit
C. 27 Contributory Service Credit
D. 60 Age of Retiree
E. 55 Age of Spouse
F. $100 \%$ Percentage of Retirement Allowance to Continue to Spouse after Retiree’s Death (Retiree Chooses this Percentage)

The computations that would be made for this case are:

Annual
G. Non-Contributory Base: $1.39 \%$ x A x B $\$ 15,568$
H. Extra for Contributory: $0.76 \% \times \mathrm{A} \times \mathrm{C} \quad \underline{182}$
I. Subtotal Benefit: G + H 22,750
J. Health Stipend $\underline{900}$
K. Total Benefit: I + J 23,650
L. Adjustment for Line F election: (1-0.83037) x I

3,859
M. Annual Amount Payable
\$19,791
Projected Benefits, taking into account increases after retirement would be:

| Year Ended June 30 | Annual <br> Amount |
| :---: | ---: |
| 2015 | $\$ 19,791$ |
| 2016 | 20,385 |
| 2017 | 20,979 |
| 2018 | 21,573 |
| 2019 | 22,167 |

Thereafter, the amount would increase by $\$ 594$ annually for life.

## SAMPLE T-DROP BENEFIT COMPUTATIONS FOR A MEMBER Entering T-DROP June 30, 2014

The data for the Example member is shown below.
A. $\$ 35,000 \quad$ Final Average Compensation
B. 28 Total Service Credit
C. 28 Contributory Service Credit
D. 55 Age of Retiree

The computations that would be made for this case are:

|  |  | Annual Amount |
| :---: | :---: | :---: |
| E. | Non-Contributory Base: $0.0139 \times$ A x B | \$13,622 |
| F. | Extra for Contributory: $0.00760 \times \mathrm{Ax} \mathrm{C}$ | 7,448 |
| G. | Reduction for T-DROP Plan: <br> ( $1 \%$ for each year of contributory service) $0.28 \times(\mathrm{E}+\mathrm{F})$ | 5,900 |
| H. | Reduction for Entering T-DROP with less than 30 years of service ( $6 \%$ for each year less than 30): $0.12 \times(E+F-G)$ | 1,820 |
| I. | Annual Amount Payable E + F - G - H | \$13,350 |

Projected Deposits, taking into account increases after DROP, and 5 years duration would be:

| Year Ended June 30 | Amount Deposited |
| :---: | :---: |
| 2015 | $\$ 13,350$ |
| 2016 | 13,751 |
| 2017 | 14,151 |
| 2018 | 14,552 |
| 2019 | 14,952 |
| Total | $\$ 70,756$ |

The amount deposited, together with credited interest can be paid as a lump sum or as an annuity. A portion of the deposits can also be placed into a Cash Balance account.

## SECTION D

## FINANCIAL INFORMATION AND GASB REPORTING

This information is presented in draft form for review by the System's auditor. Please let us know if there are any items the auditor changes so that we may maintain consistency with the System's financial statements.

## Asset Valuation Method

An essential step in the valuation process is comparing valuation assets with computed liabilities. Valuation assets are those assets that are recognized for funding purposes.

Asset valuation methods are distinguished by the timing of the recognition of investment income. Total investment income is the sum of ordinary income and capital value changes. Under a pure market value approach, ordinary investment income and all capital value changes would be recognized immediately. Because of market volatility, use of pure market values in retirement funding can result in volatile contribution rates and unstable financial ratios, contrary to ATRS objectives.

Under the ATRS asset valuation method (see page D-3), assumed investment return is recognized fully each year. Differences between actual and assumed investment return are phased-in over a closed 4 -year period. During periods when investment performance exceeds the assumed rate, the funding value will tend to be less than the market value. Conversely, during periods when investment performance is less than the assumed rate, funding value will tend to be greater than market value. If assumed rates are exactly realized for 3 consecutive years, funding value will become equal to market value.

A multi-year comparison of market value to funding (actuarial) value is on the following page.

Asset Valuation Method

| Valuation <br> Date <br> June 30 | Market <br> Value of <br> Assets <br> $\mathbf{( 1 )}$ | Actuarial <br> Value of <br> Assets <br> (2) | Ratio of <br> AV to MV <br> (2) / (1) |
| :---: | :---: | :---: | :---: |
| 1996 | $\$ 4,750$ | $\$ 4,186$ | $88 \%$ |
| 1997 | 5,747 | 4,956 | $86 \%$ |
| 1998 | 6,656 | 5,815 | $87 \%$ |
| 1999 | 7,403 | 6,740 | $91 \%$ |
| 2000 | 7,978 | 7,620 | $96 \%$ |
| 2001 | 7,643 | 8,166 | $107 \%$ |
| 2002 | 7,084 | 8,328 | $118 \%$ |
| 2003 | 7,050 | 8,113 | $115 \%$ |
| 2004 | 8,122 | 8,424 | $104 \%$ |
| 2005 | 8,811 | 8,817 | $100 \%$ |
| 2006 | 9,868 | 9,332 | $95 \%$ |
| 2007 | 11,637 | 10,519 | $90 \%$ |
| 2008 | 11,018 | 11,319 | $103 \%$ |
| 2009 | 8,847 | 10,617 | $120 \%$ |
| 2010 | 9,884 | 10,845 | $110 \%$ |
| 2011 | 11,895 | 11,146 | $94 \%$ |
| $2012 \#$ | 11,484 | 11,484 | $100 \%$ |
| 2013 | 12,830 | 12,247 | $95 \%$ |
| 2014 | 14,856 | 13,375 | $90 \%$ |

\# Actuarial Value set equal to Market Value.

## Ratio of Actuarial Value to Market Value

This year the market value of assets exceeds the actuarial value (see page A-2). To prevent unreasonably large differences between market value and funding value, there is a requirement that the recognized assets must always be between $80 \%$ and $120 \%$ of the market value (see page D-3).

## Development of Funding Value of Assets

| Year Ended June 30: | 2012 | 2013 | 2014 |  | 2015 |  | 2016 |  | 2017 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| G2. Upper Corridor Limit: 120\% x B | 13,780,662,611 | 15,395,478,694 | 17,827,532,002 |  |  |  |  |  |  |
| G3. Lower Corridor Limit: 80\% x B | 9,187,108,407 | 10,263,652,462 | 11,885,021,335 |  |  |  |  |  |  |
| G4. Funding Value End of Year | 11,483,885,509 | 12,246,805,197 | 13,374,765,500 |  |  |  |  |  |  |
| H. Actual/Projected Difference between Market and Funding Value | - | 582,760,381 | 1,481,511,168 |  | 922,922,958 |  | 364,334,750 |  | - |
| I. Market Rate of Return | (1.08)\% | 14.87 \% | 19.17 \% |  |  |  |  |  |  |
| J. Funding Rate of Return | 5.65 \% | 9.72 \% | 12.64 \% |  |  |  |  |  |  |
| K. Ratio of Funding Value to Market Value | 100.00 \% | 95.46 \% | 90.03 \% |  |  |  |  |  |  |

The Funding Value of Assets recognizes assumed investment return (line E2) fully each year. Differences between actual and assumed investment income (line E3) are phased-in over a closed 4 -year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than Market Value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than Market Value. The Funding Value of Assets is unbiased with respect to Market Value. At any time it may be either greater or less than Market Value. If assumed rates are exactly realized for 3 consecutive years, it will become equal to Market Value.

The assets of the Retirement System, as of June 30, 2014, were reported to your actuary to be $\$ 14,856,276,668$. This amount, together with a market value adjustment of $\$(1,481,511,168)$ this year, is used to finance the Retirement System liability.

+ Legislated benefit or contribution rate change.
* Revised actuarial assumptions.
A system with a high ratio of assets or liabilities to payroll will tend to experience more volatility than a system with a lesser ratio, assuming a similar asset allocation.

## SECTION F

FINANCIAL PRINCIPLES

Promises Made and To Be Paid For. As each year is completed, the System, in effect, hands an "IOU" to each member then acquiring a year of service credit. The "IOU" says: "The Arkansas Teacher Retirement System owes you one year's worth of retirement benefits, payments in cash commencing when you qualify for retirement."

The related key financial questions are:
Which generation of taxpayers contributes the money to cover the IOU?
The present taxpayers, who receive the benefit of the member's present year of service?
Or the future taxpayers, who happen to be in Arkansas at the time the IOU becomes a cash demand?

The financial objective of the ATRS is that this year's taxpayers contribute the money to cover the IOUs being handed out this year so that the employer contribution rate will remain approximately level from generation to generation -- our children and our grandchildren will not have to contribute greater percents of pay than we contribute now. This objective was set forth in Act 793 of 1977.
(There are systems which have a design for deferring contributions to future taxpayers, lured by a lower contribution rate now and putting aside the fact that the contribution rate must then relentlessly grow much greater over decades of time -- consume now, and let your children face higher contribution rates after you retire.)

An inevitable byproduct of the level-cost design is the accumulation of reserve assets for decades and the income produced when the assets are invested. Investment income becomes the third and largest contributor for benefits to employees, and is interlocked with the contribution amounts required from employees and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)
... plus ...
Interest on Unfunded Actuarial Accrued Liabilities (unfunded accrued liabilities are the difference between (i) liabilities for service already rendered and (ii) the accrued assets of the plan).

Computing Contributions to Support System Benefits. From a given schedule of benefits and from the employee data and asset data furnished, the actuary determines the contribution rates to support the benefits, by means of an actuarial valuation. An actuarial valuation has a number of ingredients such as: the rate of investment income which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement. In an actuarial valuation, assumptions must be made as to what the above rates will be, for the next year and for decades in the future. Only the subsequent actual experience of the System can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the accuracy of the various financial assumptions or the skill of the actuary and the precision of the calculations made. The System copes with these continually changing differences by having annual actuarial valuations. Each actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continual adjustments in financial position.

## The Actuarial Valuation Process

The financing diagram on the next page shows the relationship between the two fundamentally different philosophies of paying for retirement benefits: the method where contributions match cash benefit payments (or barely exceed cash benefit payments, as in the Federal Social Security program), and is thus an increasing contribution method; and the level contribution method which equalizes contributions between the generations.

The actuarial valuation is the mathematical process by which the level contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:
A. Census Data, furnished by plan administrator

Retired lives now receiving benefits
Former employees with vested benefits not yet payable
Active employees
B. + Asset data (cash \& investments), furnished by plan administrator
C. + Benefit provisions that establish eligibility and amounts of payments to members
D. + Assumptions concerning future financial experiences in various risk areas, which assumptions are established by the Board of Trustees after consulting with the actuary.
E. + The funding method for employer contributions (the long-term planned pattern for employer contributions)
F. + Mathematically combining the assumptions, the funding method, and the data
G. = Determination of:

Plan financial position, and/or
New Employer Contribution Rate

## YEARS OF TIME

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

Economic Risk Areas
Rates of investment return
Rates of pay increase
Changes in active member group size
Non-Economic Risk Areas
Ages at actual retirement
Rates of mortality
Rates of withdrawal of active members (turnover)
Rates of disability

## SECTION G

## ACTUARIAL ASSUMPTIONS

## Selection of Assumptions Used in Actuarial Valuations

## Economic Assumptions

Investment return
Pay increases to individual employees: the portion for economic changes Active member group size and total payroll growth

## Demographic Assumptions

Actual ages at service retirement Pay increases to individual members: the portion for merit \& seniority Disability while actively employed Separations before retirement
 Mortality after retirement Mortality before retirement

## Relationship Between Plan Governing Body and the Actuary

The actuary should have the primary responsibility for choosing the demographic assumptions used in the actuarial valuation, making use of specialized training and experience.

The actuary and other professionals can provide guidance concerning the choice of suitable economic assumptions, but the basis of the economic assumptions is the assumed rate of inflation, a quantity which defies accurate prediction. Given an assumed rate of future inflation, it is very important that this rate be applied in a consistent manner in deriving the assumed rate of investment return, the economic portion of the assumption on pay increases to individual employees, and the assumed rate of growth of active member payroll. Consistent application of assumptions is an area in which the actuary has specialized training.

A sound procedure is that the actuary suggests reasonable alternatives for economic assumptions, followed by discussion involving the actuary, the Plan Governing Body, and other professionals, and the Plan Governing Body then makes a final choice from the various alternatives.

## Summary of Assumptions Used in Actuarial Valuations For the Arkansas Teacher Retirement System Assumptions Adopted by Board of Trustees After Consulting With Actuary

## Economic Assumptions

The investment return rate used in the valuation was $8 \%$ per year, compounded annually (net after administrative expenses). This rate of return is not the assumed real rate of return. The real rate of return over wage inflation in this valuation is defined to be the portion of investment return which is more than the wage inflation rate. Considering wage inflation recognition of $3.25 \%$, the $8 \%$ rate translates to an assumed real rate of return over wage inflation of $4.75 \%$. This rate was first used for the June 30, 2011 valuation. The assumed real rate of return over price inflation would be higher on the order $5 \%$ to $5.25 \%$.

Pay increase assumptions for individual active members are shown on pages G-7 and G-8. Part of the assumption for each age is for a merit and/or seniority increase, and the other $3.25 \%$ recognizes wage inflation. These rates were first used for the June 30, 2011 valuation.

No specific Price Inflation is needed for this valuation. However, the wage inflation and interest rate assumptions would be compatible with a price inflation assumption of $2.75 \%$. It is assumed that the 3\% COLA will always be paid.

The Active Member Group size is assumed to remain constant at its present level.

Total active member payroll is assumed to increase $3.25 \%$ per year, which is the portion of the individual pay increase assumptions attributable to wage inflation. This rate was first used for the June 30, 2011 valuation.

## Non-Economic Assumptions

The mortality table used was the RP-2000 Mortality table for males and females projected 25 years with scale AA ( $95 \%$ for men $\& 87 \%$ for women). Mortality rates were adjusted to include a small margin for future mortality improvement as described in the table named above. Related values are shown on page G-4. This table was first used for the June 30, 2011 valuation. For disabled lives, the mortality table used was the 1983 Group Annuity Mortality Table set forward 5 years. The set forward of 5 years was first used for the June 30, 2002 valuation.

The probabilities of retirement for members eligible to retire are shown on pages G-5 and G-6. The rates for full retirement were first used in the June 30, 2011 valuation. The rates for reduced retirement were first used in the June 30, 2002 valuation.

The probabilities of withdrawal from service, death-in-service and disability are shown for sample ages on pages G-7 and G-8. These rates were first used in the June 30, 2011 valuation.

The entry age actuarial cost method of valuation was used in determining accrued liabilities and normal cost.

Differences in the past between assumed experience and actual experience ("actuarial gains and losses") become part of actuarial accrued liabilities.

Unfunded actuarial accrued liabilities are amortized to produce contribution amounts (the total of principal \& interest) which are level percents of payroll contributions.

These cost methods were first used in the June 30, 1986 valuation.

Asset Valuation Method. A market value related asset method is used as described on page D-1. This method was first used in the June 30, 1995 valuation. It was modified following the 1997-2002 Experience Study to include an 80\% - 120\% market value corridor.

The data about persons now covered and about present assets was furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary. Members whose dates of birth were not supplied were assumed to be 40 years old on the valuation date. Members whose salaries were not supplied and that entered T-DROP before September 2003 were assumed to have the group average pay of $\$ 64,568$. Those that entered after were assumed to have the group average pay of $\$ 61,085$.

## DURATION OF T-DROP FOR MEMBERS

Present T-DROP members are assumed to remain in T-DROP according to the following table:

| Entry <br> Age | Assumed <br> Duration Years |
| :---: | :---: |
| $50-56$ | 6 |
| 57 | 5 |
| 58 | 4 |
| $59+$ | 3 |

Future retirees are assumed to have entered T-DROP at the time that is to their greatest financial advantage based on the schedule above.

Miscellaneous and Technical Assumptions<br>June 30, 2014

Marriage Assumption:

Pay Increase Timing:

Decrement Timing:

Eligibility Testing:

Decrement Relativity:

Decrement Operation:

Normal Form of Benefit:

Incidence of Contributions:
Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made. The payroll used for this purpose is payroll for all active members plus payroll for members who entered T-DROP on or after September 2003 and retirees who returned to work.

Active member liabilities were increased by $0.25 \%$ to account for subsidized Options, Service Purchases, and data uncertainties.

## SECTION H

GLOSSARY

## GLOSSARY

Accrued Service. The service credited under the plan which was rendered before the date of the actuarial valuation.

Accumulated Benefit Obligation. The actuarial present value of vested and non-vested benefits based on service to date and past and current salary levels.

Actuarial Accrued Liability. The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."

Actuarial Assumptions. Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method. A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."

Actuarial Equivalent. A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value. The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

## Actuarial Present Value of Credited Projected Benefits or Pension Benefit

 Obligation. The present value of future benefits based on service to date and the effect projected salary increases.
## GLOSSARY

Actuary. A person who is trained in the applications of probability and compound interest to solve problems in business and finance that involve payment of money in the future, contingent upon the occurrence of future events. Most actuaries in the United States are Members of the American Academy of Actuaries. The Society of Actuaries is an international research, education and membership organization for actuaries in the life and health insurance, employee benefits, and pension fields. It administers a series of examinations leading initially to Associateship and the designation A.S.A. and ultimately to Fellowship with the designation F.S.A. The federal government certifies actuaries to practice under ERISA with the designation of E.A.

Amortization. Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss). A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Normal Cost. The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Plan Termination Liability. The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for future service and salary. The termination liability will generally be less than the liabilities computed on a "going concern" basis and is not normally determined in a routine actuarial valuation.

Reserve Account. An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liability. The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

Valuation Assets. The value of current plan assets recognized for valuation purposes. Generally based on book value plus a portion of unrealized appreciation or depreciation.

[^0]:    \# The actuary calculated this return figure so it may not exactly match the investment consultant's figure.

[^1]:    $\square$ Valuation Year

[^2]:    * The $\$ 5,000$ benefit used to begin this schedule is an arbitrary amount. A smaller beginning amount would show a smaller purchasing power loss in percent loss.
    \# Based on Consumer Price Index, All Urban Consumers, United States City Average (June values).
