## Appendix

30 Summary of assumptions used in retired life valuations

December 13, 2019

Board of Trustees
Arkansas Teacher Retirement System
Little Rock, Arkansas
Dear Board Members:

Presented in this report are the results of the Annual Actuarial Valuation of annuities being paid to retirees and beneficiaries of the Arkansas Teacher Retirement System.

The date of the valuation was June 30, 2019 (using amounts payable as of July 1, 2019).
This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Retirement System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The valuation was based upon census data and financial information provided by the System's administrative staff. Preparation of this data requires considerable staff time. The helpful cooperation of the Arkansas Teacher Retirement System staff in furnishing the data is acknowledged with appreciation. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the data provided by ATRS.

This report was prepared using certain assumptions approved by the Board. The actuarial assumptions used for valuation purposes are summarized in the Appendix. These assumptions reflect experience during the period July 1, 2010 to June 30, 2015 and expectations for the future.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law. The scope of an actuarial valuation does not contain an analysis of the potential range of such future measurements.

This is one of multiple documents comprising the actuarial results. The other documents include the active and inactive valuation dated November 25, 2019, and the presentation dated December 2, 2019.

To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice promulgated by the Actuarial Standards Board. The actuarial assumptions used for the valuation produce results which, individually and in the aggregate, are reasonable.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. Brian B. Murphy, Judith A. Kermans and Heidi G. Barry are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. The actuaries submitting this report are independent of the plan sponsor.

Respectfully submitted,

Brian B. Murphy, FSA, E\&, FCA, MAAA, PhD

Judith A. Kerman, EA, FCA, MAAA

Heidi G. Barry, ASA, FCA, MAAA
BBM/JAK/HGB:ah

## Comments

As expected, during the year ended June 30, 2019 the number of retired lives increased, as did the total amount being paid monthly to retired lives.

The financing diagram on page 7 shows the general pattern in which cash benefits increase (the green line). The schedule below shows how ATRS history illustrates the general pattern.

| June 30 | Retired Lives Receiving Benefits |  |  |
| :---: | :---: | :---: | :---: |
|  | No. | Annual Rates | \% of Active Payroll\# |
|  |  | (millions) |  |
| 1967 | 3,846 | \$ 6.27 |  |
| 1972 | 5,453 | 11.08 |  |
| 1977 | 7,524 | 23.96 |  |
| 1982 | 8,828 | 36.64 |  |
| 1987 | 10,526 | 66.45 | 10.0\% |
| 1992 | 12,033 | 115.50 | 10.7\% |
| 1997 | 14,233 | 194.90 | 15.0\% |
| 1998 | 14,802 | 220.38 | 16.1\% |
| 1999 | 15,887 | 248.75 | 17.4\% |
| 2000 | 16,657 | 280.14 | 18.9\% |
| 2001 | 17,778 | 309.03 | 19.8\% |
| 2002 | 19,199 | 334.15 | 20.5\% |
| 2003 | 20,271 | 359.98 | 21.4\% |
| 2004 | 21,428 | 386.23 | 22.1\% |
| 2005 | 22,680 | 415.04 | 21.2\% |
| 2006 | 24,153 | 449.77 | 21.6\% |
| 2007 | 25,611 | 484.55 | 21.1\% |
| 2008 | 26,801 | 515.56 | 21.5\% |
| 2009 | 28,818 | 564.59 | 22.8\% |
| 2010 | 30,587 | 612.77 | 23.1\% |
| 2011 | 32,099 | 657.08 | 24.1\% |
| 2012 | 34,160 | 709.17 | 26.1\% |
| 2013 | 36,254 | 763.76 | 28.0\% |
| 2014 | 38,478 | 822.19 | 29.8\% |
| 2015 | 40,748 | 916.62 | 33.0\% |
| 2016 | 43,095 | 983.87 | 35.3\% |
| 2017 | 45,092 | 1,044.74 | 37.1\% |
| 2018 | 46,824 | 1,099.35 | 38.3\% |
| 2019 | 48,677 | 1,146.74 | 39.4\% |

\# Doesn't include payroll for retirees who have returned to work.

A significant financial goal for the Teacher Retirement System was to reach a point in time where System assets fully covered the liabilities for future benefit payments to retirees and beneficiaries then on rolls. This goal was achieved in 1980 and retired life liabilities continue to be $100 \%$ funded.

## Other Observations

## General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning $7.50 \%$ on the actuarial value of assets), it is expected that:

1) The unfunded actuarial accrued liabilities will be fully amortized after 28 years;
2) The funded status of the plan will increase gradually towards a $100 \%$ funded ratio; and
3) The unfunded accrued liability will increase for an extended period before beginning to decline.

## Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations, in other words of transferring the obligations to an unrelated third party in an arm's length market value type transaction.
2) The measurement is dependent upon the actuarial cost method which, in combination with the plan's amortization policy, affects the timing and amounts of future contributions. A funded status measurement in this report of $100 \%$ is not synonymous with no required future contributions. If the funded status were $100 \%$, the plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

## Limitations of Project Scope

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entity to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

Financial Principles

## Annual Reserve Transfers

The annual accounting transfers listed below are recommended so that retired life accounts will be fully funded as of the valuation date.

| Reserve Account | June 30, 2019 <br> Balance Reported | Transfer Amount | June 30, 2019 <br> Balance <br> After Transfer |
| :---: | :---: | :---: | :---: |
| Retiree Accounts |  |  |  |
| RRA | \$ 11,844,778,384 | \$ 238,672,146 | \$ 12,083,450,530 |
| 808 RRA | 11,497,384 | $(379,923)$ | 11,117,461 |
| SBA | 105,863,197 | 443,237 | 106,306,434 |
| Total Retiree Accounts | 11,962,138,965 | 238,735,460 | 12,200,874,425 |
| EAA | $(5,848,501,337)$ | $(238,735,460)$ | $(6,087,236,797)$ |
| Total | \$ 6,113,637,628 | \$ | \$ 6,113,637,628 |

Lump sum death benefits for retirees are paid from the Employer Accumulation Account and are not included in the figures shown in this report. The liabilities for lump sum death benefits for retirees are currently $\$ 125.0$ million.

# Financial Principles and Operational Techniques 

Promises Made and To Be Paid For. As each year is completed, the System in effect hands an "IOU" to each member then acquiring a year of service credit. The "IOU" says: "The Arkansas Teacher Retirement System owes you one year's worth of retirement benefits, payments in cash commencing when you qualify for retirement."

The related key financial questions are:
Which generation of taxpayers contributes the money to cover the IOU?
The present taxpayers, who receive the benefit of the member's present year of service?
Or the future taxpayers, who happen to be in Arkansas at the time the IOU becomes a cash demand?

The financial objective of the ATRS is that this year's taxpayers contribute the money to cover the IOUs being handed out this year so that the employer contribution rate will remain approximately level from generation to generation -- our children and our grandchildren will not have to contribute greater percents of pay than we contribute now. This objective was set forth in Act 793 of 1977.
(There are systems which have a design for deferring contributions to future taxpayers, lured by a lower contribution rate now and putting aside the fact that the contribution rate must then relentlessly grow much greater over decades of time -- consume now, and let your children face higher contribution rates after you retire.)

An inevitable byproduct of the level-cost design is the accumulation of reserve assets for decades and the income produced when the assets are invested. Investment income becomes the third and largest contributor for benefits to employees, and is interlocked with the contribution amounts required from employees and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)
... plus ...
Interest on Unfunded Actuarial Accrued Liabilities (unfunded accrued
liabilities are the difference between (i) liabilities for service
already rendered and (ii) the accrued assets of the plan).

Computing Contributions to Support System Benefits. From a given schedule of benefits and from the employee data and asset data furnished, the actuary determines the contribution rates to support the benefits, by means of an actuarial valuation. An actuarial valuation has a number of ingredients such as: the rate of investment income which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement. In an actuarial valuation, assumptions must be made as to what the above rates will be, for the next year and for decades in the future. Only the subsequent actual experience of the System can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the accuracy of the assumptions or the skill of the actuary and the precision of the calculations made. The future can be predicted with considerable but not complete precision. ATRS copes with these continually changing differences by having annual actuarial valuations. Each actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continual adjustments in financial position.

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- Economic Risk Areas

Rates of investment return
Rates of pay increase
Changes in active member group size

- Non-Economic Risk Areas

Ages at actual retirement
Rates of mortality
Rates of withdrawal of active members (turnover)
Rates of disability

## The Actuarial Valuation Process

The financing diagram on the preceding page shows the relationship between the two fundamentally different philosophies of paying for retirement benefits: the method where contributions match cash benefit payments (or barely exceed cash benefit payments, as in the Federal Social Security program), and is thus an increasing contribution method; and the level contribution method which equalizes contributions between the generations.

The actuarial valuation is the mathematical process by which the level contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:
A. Census data, furnished by plan administrator

Retired lives now receiving benefits
Former employees with vested benefits not yet payable
Active employees
B. + Asset data (cash \& investments), furnished by plan administrator
C. + Benefit provisions that establish eligibility and amounts of payments to members
D. + Assumptions concerning future financial experience in various risk areas, which assumptions are established by the Board of Trustees after consulting with the actuary
E. + The funding method for employer contributions (the long-term planned pattern for employer contributions)
F. + Mathematically combining the assumptions, the funding method, and the data
G. = Determination of:

Plan financial position, and/or
New Employer Contribution Rate

## Benefit Provisions

# Summary of Benefit Provisions 

June 30, 2019

1. Post-Retirement Increases - A.C.A. §§ 24-7-713, 24-7-727 (compound COLA). Each July 1, annuities are adjusted to be equal to the base annuity times $100 \%$ plus $3 \%$ for each full year in the period from the effective date of the base annuity to the current July 1. The base annuity is the amount of the member's annuity on the later of July 1, 2001 or the effective date of retirement, as re-determined by Acts 396 of 1999 and 992 of 1997. The July 1, 2009 cost of living adjustment for retirees was compounded. The annuity was set to $103 \%$ of the June 30, 2009 retirement benefit amount. After it was calculated on July 1, 2009, the base amount was reset to be the July 1, 2009 benefit amount. Future cost of living raises will be established by the new updated base amount. Future cost of living adjustments will be evaluated on an annual basis to determine if a simple or compound cost of living increase will be given, depending on the financial condition of the System. Act 967 of 2013 gives the ATRS Board authority to reverse the compounding of a benefit and reset the base amount to the precompounding amount. If this reversal were to occur, it would include participants in the T-DROP plan. The future benefits of a member would not be reduced to recover any benefits paid to a member as a result of the compounding. In addition, the member's benefit on the date of the reversal would not be impacted, but future COLA's would be based upon the reset base amount. This act is dependent upon the actuary's certification that the amortization period is in excess of 30 years to pay unfunded liabilities prior to any reversal of the compounding of the COLA. Act 780 of 2017 allows the right to reverse the 2009 compound COLA when unfunded liabilities exceed an 18-year amortization. The act also allows a phase in of the change during months in which a COLA raise is given to prevent any retiree or option beneficiary from having an actual reduction in monthly benefit payments.
2. Lump Sum Death Benefit - A.C.A. § 24-7-720. Beneficiaries of deceased active members or retirees with 10 or more years of ATRS credited service are eligible to receive a lump sum death benefit of up to $\$ 10,000$ ( $\$ 6,667$ for noncontributory service-benefit). The amount will be prorated for members who have both contributory service and noncontributory service. Members with 15 or more years of contributory service will receive the full $\$ 10,000$ (Act 977 of 2011).
3. Act $\mathbf{8 0 8}$ Retirement - A.C.A. § 24-4-732. Any employee of a state agency who was an active member of the Arkansas Teacher Retirement System on April 8, 1987, and who qualified for retirement before January 1, 1988, could become a member of the Arkansas Public Employees Retirement System and retire from that system. All credited service was transferred to that system but the member's contributions were retained by the Arkansas Teacher Retirement System and the benefit amount is transferred monthly to the Arkansas Public Employees Retirement System. Each July 1, annuities are adjusted by $3 \%$ (compound escalator).
4. Act 793 Retirement - A.C.A § 24-4-522. Any employee who was a member of the rehabilitation services in 1977 was permitted to become a member of the Arkansas Public Employees Retirement System. Liabilities associated with prior service earned through June 30, 1978 remain in the Arkansas Teacher Retirement System. Future service is allocated to the Arkansas Public Employees Retirement System. Each July 1, annuities are adjusted by 3\% (compound escalator).

# Summary of Benefit Provisions <br> June 30, 2019 

5. Retiree Benefit Stipend - A.C.A. § 24-7-713. Each retired member as of June 30, 2008, with 5 or more years of ATRS credited service receives a $\$ 75$ per month stipend. Members in T-DROP do not receive the $\$ 75$ per month stipend until actual retirement. For all members retiring on or after July 1, 2008, a minimum of 10 years of ATRS credited service is required to receive the $\$ 75$ per month stipend. Act 603 of 2013 allows the ATRS Board to increase or decrease the stipend to a minimum of $\$ 1$ per month and a maximum of $\$ 75$ per month. This act is dependent upon the actuary's certification that the amortization period is in excess of 18 years to pay unfunded liabilities prior to any reduction in the current stipend. The stipend for fiscal year 2018 remains at $\$ 75$ per month. By Board Resolution 2017-34 on November 13, 2017 the benefit stipend is removed from the base amount for all retirees and beneficiaries beginning fiscal year 2019 and the benefit stipend will be reduced to $\$ 50.00$ for fiscal year 2020 and beyond. The Resolution contains a "hold harmless" provision that prevents the lowering of the stipend if it would actually reduce the total monthly benefit. This would only affect retirees when the COLA is less than $\$ 25$ per month.
6. T-DROP Cash Balance Account. Effective July 1, 2012, a T-DROP cash balance account was established that allows members exiting (retiring) from T-DROP to place all or a portion of their T-DROP proceeds into a Cash Balance Account (CBA) at ATRS. The interest rate credited will be between $2.5 \%$ and $4.0 \%$, increasing 25 basis points for each year on deposit through the 5th year, and then $4 \%$ for the 6th and subsequent years.
7. Optional Forms of Benefits - A.C.A. § 24-7-706:

## Option 1 (Straight Life Annuity)

A member will receive the maximum monthly benefit for which he/she qualifies, throughout his/her lifetime. No monthly benefits will be paid to his/her beneficiary after the member's death. Should a member die before he/she has drawn benefits in an amount equal to his/her contributions plus earned interest, the balance will be paid to a designated beneficiary. The designated beneficiary may be anyone chosen by the member.

## Option A (100\% Survivor Annuity)

Under this option a member will receive a reduced annuity throughout his/her lifetime. Upon the member's death, the designated beneficiary will receive the same annuity for the balance of his/her lifetime.

## Option B (50\% Survivor Annuity)

Under this option a member will receive a reduced annuity throughout his/her lifetime. Upon the member's death, the designated beneficiary will receive one-half ( $1 / 2$ ) of this annuity for the balance of his/her lifetime.

# Summary of Benefit Provisions <br> June 30, 2019 

## Option C (Annuity for Ten Years Certain and Life Thereafter)

A reduced monthly benefit payable for 120 months. After that time, or if the beneficiary dies prior to 120 months, a member's monthly allowance will revert to the amount he/she would have received under the regular plan and continue for life. If the member dies before receiving 120 payments, the designated beneficiary will receive a monthly benefit in the same amount until monthly benefits to both the member and the beneficiary equal 120 monthly payments. No further benefits are then payable to the beneficiary.

## Pop-Up Election

Following the death of or a divorce from the member's designated beneficiary, his or her benefit reverts (pops-up) to the straight life annuity amount from the elected optional annuity amount. The member may then elect new beneficiaries in accordance with Arkansas Code and rules adopted by the ATRS board.

# Sample Benefit Computations for a Member <br> Retiring July 1, 2019 with a <br> Simple 3\% COLA 

Data for an example member is shown below.
Annual retirement benefit as of July 1, 2019 (excluding stipend): $\$ 30,000$

Projected benefits, taking into account increases after retirement would be:

|  | Annual Amount |  |  |
| :---: | ---: | ---: | ---: |
| Year Ended June 30 | Base | Current | \$ Increase |
| 2020 | $\$ 30,000$ | $\$ 30,000$ | $\$ 0$ |
| 2021 | 30,000 | 30,900 | 900 |
| 2022 | 30,000 | 31,800 | 900 |
| 2023 | 30,000 | 32,700 | 900 |
| 2024 | 30,000 | 33,600 | 900 |

Thereafter, the amount would increase by $\$ 900$ annually for life. Act 793 members and Act 808 members receive compound COLAs.

## Changes in Purchasing Power

## Benefit Changes During Recent Years of Retirement \& Related Changes in Purchasing Power (1990 \$)

| Year <br> Ended <br> June 30 | Increase <br> Beginning <br> of Year | Benefit <br> Dollars <br> in Year* | Inflation <br> (Loss) <br> in Year\# | Purchasing Power <br> at Year End |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1990 | $\$---$ | $\$ 11,000$ | ---- | $\$ 11,000$ | 1090 \$ |
| 1991 | 330 | 11,330 | $(4.7) \%$ | 10,822 | 989 |

## Annuities Being Paid Retirees and Beneficiaries July 1, 2019 by Type of Annuity Being Paid

The Original Annuity is the annuity at the date of retirement (includes stipend).
The Base Annuity is the amount from which the 3.0\% COLA is calculated. Effective July 1, 2018, the stipend is no longer included.

The Current Annuity is the annuity payable at July 1, 2019 including the COLA granted on July 1.

Enclosures

[^0]:    * The $\$ 11,000$ benefit used to begin this schedule is an arbitrary amount. A different beginning amount could show a different purchasing power amount, but the same in percent loss.
    \# Based on Consumer Price Index, All Urban Consumers, United States City Average (June values).

[^1]:    * T-DROP participants are classified as active members for purposes of the valuation and are not included in this schedule.
    @ T-DROP annuities for retired members included 2015 and later.

[^2]:    * Includes plan amendments.
    \# After change in interest assumption from 6.0\% to 7.0\%, change in post-retirement adjustments from $1.5 \%$ to $3.0 \%$ and recommended reserve transfer.
    + After redetermination of base annuity, retroactive application of new minimum benefit formula and recommended reserve transfer.
    $\wedge$ After changes in assumptions.
